Professional Experience

Senior Full Stack Software Engineer, **Estudologia**

Aug 2024 – Jan 2026

- Delivered high-quality, robust production code across multiple Ruby and React systems, including academic management platforms used by 10,000+ students and a commercial library management system.
- Worked closely with stakeholders and product owners to refine business rules and uncover gaps in proposed workflows to fulfill business requirements.
- Collaborated with designers and creative directors to turn complex workflows into intuitive UI/UX for end users.
- Built a real-time quiz game with AI-generated questions, helping students learn while competing with each other.
- Expanded API test coverage from 50% to 80% by writing unit tests for critical API features.

Lead Full Stack Software Engineer, **Inkluziva**

Feb 2024 – Aug 2024

- Worked alongside stakeholders to prototype the company's Binance trading automation system and define the first version of its trading workflows.
- Built and shipped the React frontend and Node.js backend for the trading automation platform.
- Automated crypto trading tax reporting, eliminating manual errors and saving 20 hours of work per week.
- Identified and remediated 3 critical security vulnerabilities across the platform.
- Worked on a crypto trading digital wallet, integrating payment APIs and authentication logic.
- Built a feature for creating customizable NFTs in seconds, without requiring users to understand blockchain concepts.

Mid-Level Full Stack Software Engineer, **Incript**

Apr 2023 – Jan 2024

- Built and shipped the Angular frontend for an educational platform that helped public-school students engage with literature and prepare for Brazil's college entrance exams.
- Designed and delivered the platform's admin panel for managing published content and creators.

Mid-Level Front-End Software Engineer, **OpahIT**

Feb 2021 – May 2021

- Modernized the UI and improved mobile responsiveness in Banco Fibra's Angular web banking app.

Junior Full Stack Software Engineer, **Basis S.A.**

Dec 2018 – Sep 2020

- Contributed to new features and resolved bugs across the Java backend and Angular frontend of IBAMA's nationwide system for managing tree-felling and logging permits in over 10 million hectares of forest.
