

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Ruby | **Frontend:** React, Angular, Tailwind CSS | **Backend:** Node.js, NestJS, Express, Spring Boot, Ruby on Rails | **Databases:** PostgreSQL, Oracle, Redis | **Cloud & DevOps:** AWS, Docker, GitHub Actions | **ORM/Data Access:** Prisma, TypeORM, Active Record | **Testing:** Jest, JUnit, RSpec

PROFESSIONAL EXPERIENCE

Senior Full Stack Software Engineer at *Estudologia* Aug 2024 – Jan 2026

- Built the Ruby backend and React frontend for two academic management systems serving 10,000+ low-income students, expanding access to interactive content and boosting engagement.
- Built a quiz game feature end to end, from database schema and backend API design to asynchronous question generation with background jobs and the OpenAI API.
- Implemented real-time game state updates and notifications using WebSockets.
- Implemented Redis-based inter-service communication and queue orchestration for an automated student essay grading pipeline powered by the OpenAI API.
- Optimized a critical API used on nearly every screen, reducing response time from 20s to 300ms.
- Expanded API test coverage from 50% to 80% by writing unit tests for over 5,000 lines of code across critical API features.
- Built a Ruby backend for a full-featured commercial library management system, covering core workflows such as catalog management, member accounts, reservations, and book checkouts and returns.

Lead Full Stack Software Engineer at *Inkluziva* Feb 2024 – Aug 2024

- Led technical delivery as the primary engineer on the team, working closely with stakeholders to shape requirements and define solutions.
- Led the development of a React frontend and Node.js backend for an automated trading system on Binance.
- Automated the company's tax reporting for crypto trading, eliminating human error and saving 20 hours of manual work per week.
- Remediated 3 critical security vulnerabilities and strengthened platform security controls.
- Built the Angular frontend and Node.js backend for a digital wallet used in crypto trading, integrating PIX and credit card payment APIs and implementing cookie-based JWT authentication with refresh token flows.
- Developed a feature for creating fully customizable NFTs in seconds, with no blockchain knowledge required.

Mid-Level Full Stack Software Engineer at *Incript* Apr 2023 – Jan 2024

- Led the development of the Angular frontend of an educational platform, enabling public-school students to engage with literary content and prepare for Brazil's college entrance exams.
- Built the React frontend of a security devices management system for homes and buildings.
- Optimized critical pages, reducing load times from up to 6 seconds to less than 1 second.

Mid-Level Front-End Software Engineer at *OpahIT* Feb 2021 – May 2021

- Modernized the UI and improved mobile responsiveness in Banco Fibra's Angular web banking app.

Junior Full Stack Software Engineer at *Basis S.A.* Dec 2018 – Sep 2020

- Contributed to new features and resolved bugs across the Java backend and Angular frontend of IBAMA's nationwide system for managing tree-felling and logging permits in over 10 million hectares of forest.

SELECTED PROJECTS

Skill-Based Doubles Matchmaker — [GitHub](#) | [Live](#) React, TypeScript, Tailwind CSS (Shadcn/ui)

- Mobile-first web app for scheduling doubles matches with skill-based balancing and court management.
