

Maurício Azevedo

Software Engineer — Full Stack & Product Engineering

Brasília, Brazil · Remote Worldwide · [Email](#) · [WhatsApp](#) · [GitHub](#) · [LinkedIn](#) · [Portfolio](#)

Software Engineer with 6+ years of experience building production web platforms across education, fintech, crypto, public-sector systems, and AI-enabled products. Strong ownership across frontend, backend, APIs, testing, security, integrations, and product workflows. Proven impact in systems used by 10,000+ users, test coverage expansion, workflow automation, and business-critical product delivery.

PROFESSIONAL EXPERIENCE

Mid-Level Full Stack Software Engineer, Estudologia — React, Next.js, Ruby on Rails Aug 2024 – Jan 2026

- Delivered production features for an AI-assisted education platform used daily by 10,000+ students and hundreds of teachers across dozens of schools.
- Worked on core learning workflows where AI generated assessments, analyzed performance, and helped create personalized lesson plans based on individual results.
- Contributed to AI-powered essay review workflows, including production fixes in an essay reading/correction microservice providing automated feedback to students.
- Resolved critical production issues across authentication and account-access flows, including login, password reset, and SSO microservices.
- Expanded API test coverage from 50% to 80% by adding unit tests around critical backend features and business rules.
- Partnered with product owners, stakeholders, designers, and creative directors to turn complex academic workflows into intuitive, reliable product experiences.

Mid-Level Full Stack Software Engineer, Inkluziva — React, Node.js, NestJS Feb 2024 – Aug 2024

- Led development of a USDT trading automation platform integrated with Binance API, supporting daily buy/sell operations involving BRL 10M+ with limited supervision.
- Owned the technical execution as sole developer, working with the company owner to turn trading operations into automated workflows and system rules.
- Built and shipped the platform end to end, including trading flows, Binance API integration, banking/payment APIs, business rules, and edge-case handling.
- Co-designed and implemented reconciliation logic matching Binance trades with bank statement records by amount, date, and payer identity to trigger USDT release.
- Automated crypto trading tax reporting, eliminating recurring manual errors and replacing full-day manual reporting work.
- Reduced dependency on manual trading operations previously handled by a 3-person team and later mentored a junior developer as the engineering team expanded.
- Identified and remediated 3 critical security vulnerabilities across the platform, improving reliability and reducing production risk.

Mid-Level Full Stack Software Engineer, Incript — React, Angular, Node.js, NestJS Apr 2023 – Jan 2024

- Re-architected inherited codebases for a crypto digital wallet, improving maintainability with feature-based organization, reusable components, service layers, thin controllers, and repository patterns.
- Built production features across wallet workflows, payment API integrations, authentication logic, and user-facing financial operations.
- Designed and implemented an end-to-end NFT creation feature from scratch, enabling users to generate customizable NFTs in seconds without blockchain knowledge.
- Built the frontend from scratch for an educational platform that adapted classic literary works into comics to help students prepare for Brazilian college entrance exams.
- Built a complex mobile-like draggable continuous web reader, solving browser performance issues for app-like long-form comic reading on the web.

Mid-Level Front-End Software Engineer, OpahIT — Angular Feb 2021 – May 2021

- Modernized UI components and improved mobile responsiveness in Banco Fibra's web banking app, contributing to a more reliable and usable banking experience.

Junior Full Stack Software Engineer, Basis S.A. — Angular, Java, Spring Boot Dec 2018 – Sep 2020

- Contributed features, bug fixes, and maintenance to IBAMA's nationwide environmental licensing system for tree-felling and logging permits across millions of hectares.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Ruby

Frontend: React, Angular, component architecture, complex UI workflows, mobile-first web applications

Backend: Node.js, NestJS, Express, Spring Boot, Ruby on Rails, REST APIs, authentication, third-party integrations

Data & Infrastructure: PostgreSQL, Oracle, Redis, AWS, Docker

Architecture & Quality: modular codebases, service layers, microservices, test automation, CI/CD, production debugging, security remediation

Testing: Jest, JUnit, RSpec

SELECTED PROJECT

Arena Beach Tennis — Mobile-first sports ranking platform · [Live](#) | [Repo](#) Next.js, NestJS, PostgreSQL, Prisma

- Built an app that turns casual beach tennis matches into player ratings and rankings, match history, stats, profiles, groups, invites, and a lightweight social feed.
- Designed a score-aware Elo-inspired rating engine for doubles matches, with group-scoped ratings, rating snapshots, append-only fast-path updates, and full historical recalculation for edits, deletes, and retroactive matches.
- Modeled a persisted event feed for meaningful competitive moments, with visibility rules, event lifecycle handling, and transactionally synced domain events for close matches, blowouts, and group activity.
- Structured the monorepo around product/domain features, with backend-owned business logic, typed domain models, feature-based frontend architecture, ADR-style documentation, and clear separation between UI, API, domain, and persistence concerns.
